

```
do {  
    statements;  
} while( condition );
```

The diagram illustrates the execution flow of a do-while loop. A horizontal line is positioned above the closing brace of the while loop. From the right end of this line, a vertical line descends, then a horizontal line extends to the left, ending in an arrow that points back to the 'statements;' line, representing a loop iteration when the condition is true. Below the 'while(' line, the word 'false' is written in green. A vertical arrow points downwards from the space between 'while(' and 'condition', indicating the exit path from the loop when the condition is false.
